## ▼ CLINICAL NOTES

Patient presents with progressive memory loss over the past 2 years. Family reports difficulty with recent events and occasional confusion about time. Patient is alert and oriented to person and place. Gait is steady. No focal neurological deficits noted. Mood appears stable.

## ▼ ASSESSMENT

Mild cognitive impairment, likely early-stage dementia. Rule out reversible causes.

## ▼ PLAN

- Continue Donepezil 10 mg daily
- Start Memantine 20 mg daily
- Order MRI brain without contrast
- Order CBC, CMP, TSH, B12, RPR
- Refer to neurology for evaluation
- Follow up in 3 months
